

## Weekly Dose of the in

**RULE** Use the lower word sign for "in" wherever the word it represents occurs provided that any sequence in which it occurs includes a sign with an upper dot.

Below are 4 examples using the same word.

bein' 

*[Groupsign "in" **can** be used since the Italic Word Indicator contains an upper dot.]*

(bein') 

[Groupsign "in" **can** be used since the sequence contains an upper dot.]

bein'                                       

*[Groupsign "in" **cannot** be used since the sequence doesn't contain an upper dot.]*

“bein”     [Wait a minute, this example is confusing. The Lower Sign Rule 10.6.10 will explain everything.]

Any type of quotation mark which may be present is considered to have only lower dots. In the example, the *double quotation marks*, containing dots in the upper cell, are still quotation marks.
