Weekly Dose Spatial Sentence Diagrams with Arrows

"Working on a worksheet that has 5 sentences with arrows over part of the sentence, should the arrows be included in braille?

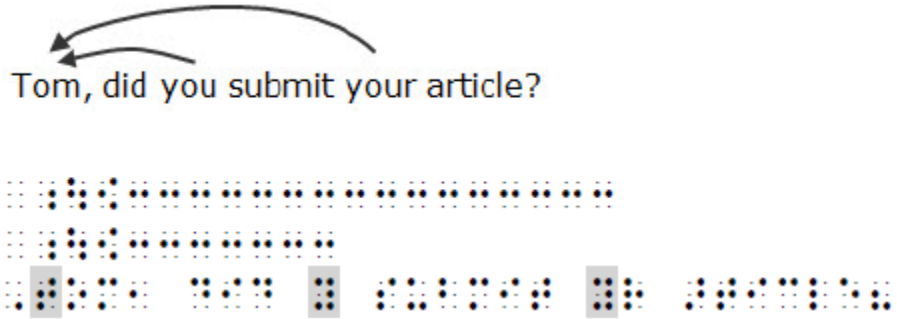

This sounds like sentence diagramming. This print format uses visual clues to teach grammar. Yes, if possible, add the arrows in braille.

Use the appropriate UEB arrow symbols.

⠳		Arrow indicator
⠳⠪	←	Simple left-pointing arrow
⠳⠕	→	Simple right-pointing arrow
⠳⠬	↑	Simple up-pointing arrow
⠳⠩	↓	Simple down-pointing arrow

- Follow print for placement and direction of arrows placed above or below sentences.
- Start symbols above or below the first letter of the word, or the number indicator of a number. Do not extend the arrow to other composition indicators or punctuation marks.
- Keep words or phrases between which an arrow shows a relationship on a single braille line.
- It may be necessary to move part of the sentence to a new line to keep the relationship intact.
- When a sentence is too long to use the arrow symbols,

Below is an example to show where the arrows start and end.

RULE 18.9.1 It is also important to mention, special sentence diagramming is difficult to represent in braille. Insert a transcriber's note saying such diagramming has been omitted.

Sample: Sentence diagramming is omitted.
