Weekly Dose Typeform Symbol Indicator and Contractions

Reminder: A question will often whirl around the topic of how to think of a symbols-sequence, this may help. Think of a symbols-sequence as one word. Now, that is clever and easy way to remember.

Perspective: Only one typeform word indicator is needed in a hyphenated expression without spaces regardless of the number of words separated by hyphens or dashes.

Another consideration, double emphasis within an Alphabetic wordsign.

EXAMPLE:
Which vowels are underlined in kn**o**wl**e**dg**e**?
⠠⠓ ⠠⠺⠓⠊⠉⠓ ⠠⠧⠕⠺⠑⠇⠎ ⠁⠗⠑ ⠥⠝⠙⠑⠗⠇⠊⠝⠑⠙ ⠊⠝ ⠅⠝⠕⠺⠇⠑⠙⠛⠑⠦

- Knowledge cannot be used it is no longer standing alone. Know is not used because the o is underlined, but ow and ed may be used. Only the first letter of the contraction is emphasized.

- Bold emphasis added to the underlined letters that are mentioned in the text in knowledge is ignored since it is used more for the sighted reader to draw the eye to the vowels and doesn't add any information to the braille reader.
